

Naming Conventions for Files and Directories

Consistent naming conventions are crucial for readability and maintainability. Here are some recommendations:

Descriptive Names: Choose names that clearly describe the file or directory's purpose.

Kebab-Case for Folders: Use kebab-case (e.g., user-profile) for folder names, as it's URL-friendly and commonly used in Next.js projects.

CamelCase for Components: Use CamelCase for React component files (e.g., UserProfile.js) to match the component name.

Lowercase for Utilities: Use lowercase for utility files and directories (e.g., utils or fetch-data.js).
